

Providing Industry with Cleaner Air through Innovation

Industrial Ventilation Engineering

Dust and Fume Control

Air Systems Analysis

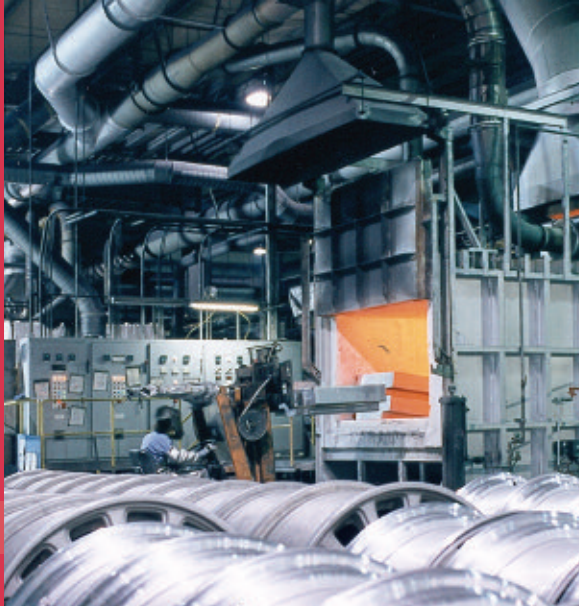

Testing and Balancing

Stack Emissions Testing

NEBB Certified

All USEPA Methods

A family of companies creating better working environments for you.

Industries Served

- ALUMINUM
- AUTOMOTIVE
- CHEMICAL
- COATINGS
- COSMETICS
- FLAVORINGS
- FOODS
- FOUNDRIES
- FURNITURE
- GLASS
- PERSONAL CARE PRODUCTS
- PLASTICS
- PRIMARY METALS
- PRINTING
- SMELTERS
- SOAP MANUFACTURING
- SPECIALIZED METALS
- STEEL
- Industry Affiliations**
- ACGIH
- AMERICAN FOUNDRYMEN SOCIETY
- ASHRAE
- NEBB
- SMACNA
- SOURCE EVALUATIONS SOCIETY

Testing and Analysis Assure Cleaner Air for Industry

Kbd Technic routinely conducts stack tests for compliance demonstrations, and provides you and your staff data for engineering evaluations of process or pollution control equipment. Our testing capabilities include the measurement of particulate emissions and particle size distribution including PM-10, sulfur oxides, nitrogen oxides, volatile organic compounds (VOC's), metals, acid gases, etc.

No matter what the challenge you face, Kbd Technic teams are dedicated to providing timely emission assistance. The sampling procedures include, but are not limited to, most USEPA Reference Methods.

At the conclusion of each project, a comprehensive report is published which clearly presents the test data, summarizes the procedures that were used, includes relevant processing data, contains copies of all field and laboratory data forms, and presents the QA/QC procedures that were used for this survey.

KBD Technic has a broad range of industry experience and knowledge. Our hundreds of successful tests each year makes us a substantial partner for your constant pursuit of "Clean Air."

Systems Analysis/Testing, Adjusting and Balancing (TAB)

Combining the skills of engineering, design and problem solving, Kbd Technic always goes one step further than our competitors.

Our unique performance analysis teams are National Environmental Balancing Bureau (NEBB) certified.

Testing, Adjusting and Balancing

One of the major challenges of your plant engineering staff is the responsibility to keep air pollution systems operating efficiently. Our engineers are schooled in the ability to dissect operating systems and find the causes of under performance.

Our engineers will test your existing system and compare current conditions to your original design specifications.

For your assurance of continued optimal performance Kbd Technic will balance your system to its maximum operating efficiency.

Obviously, all plants are not new and as production demands increased over the years, many air control systems were not upgraded to meet the changing demands. Kbd Technic has the expertise to determine the best course of action to assure functionality now and for the future.

Maintenance

A ventilation system seldom produces revenue, but a poorly designed or maintained system can rob your plant of productivity and, in some cases, be out of compliance with state or federal laws.

Our analysis team can check your system on a regular basis, compare results with original start up data, and recommend changes or maintenance service to keep your system at maximum efficiency.

Industrial Ventilation Engineering and Design

To protect your plant personnel, we provide the staff and resources to handle any air flow or containment project. This includes:

- Dust
- Fumes
- Vapors
- Heat
- Oil Mist
- VOC's
- Supply/Replacement Air
- Laboratory Ventilation

We designed our company to fit your needs. Kbd Technic engineers will help you achieve cost effective compliance. We have the ability to handle major projects or we will work on any part of your project, large or small. Our engineers have extensive field experience and will work with you closely to finalize the design, engineering and equipment selection.

The end result is a system designed with the most effective technological solution to meet your needs.

Whether it is a modest system revision or total plant ventilation project, we'll stay with you well after start up. Our key to success has been customer service and customer satisfaction.

Industrial ventilation systems designed by Kbd Technic experienced engineers can save you construction, operating and maintenance costs by optimizing airflow. This expertise eliminates common mistakes such as over or under sized equipment, increased operating expenses, or worse, inefficient system design. Our optimized system design provides our clients with effective capture at practical prices.
